# Correction: *Pseudomonas fluorescens* SBW25 produces furanomycin, a non-proteinogenic amino acid with selective antimicrobial properties

Kristin Trippe<sup>1</sup>, Kerry McPhail<sup>2</sup>, Donald Armstrong<sup>3</sup>, Mark Azevedo<sup>1</sup> and Gary Banowetz<sup>1\*</sup>

It has come to our attention that the additional files (Additional files 1, 2, 3, 4, 5 and 6) in this article [1] are incorrect. The correct files can be accessed via this correction article. We apologize for any inconvenience.

## Additional files

**Additional file 1: Examples of the observed effects of *P. fluorescens* SBW25 culture filtrate on the growth of lawns of selected bacterial strains.** Images of representative agar diffusion assays are shown for five strains of plant pathogens that were sensitive to the filtrate and one representative of strains that did not respond to the filtrate (lower right corner).

**Additional file 2: <sup>1</sup>H NMR spectrum of the purified ninhydrin-reactive fraction containing L-furanomycin.**

**Additional file 3: <sup>13</sup>C NMR spectrum of the purified ninhydrin-reactive fraction containing L-furanomycin.**

**Additional file 4: Effects of selected amino acids on the antimicrobial activity of *P. fluorescens* SBW25 culture filtrate.** Images of representative agar diffusion assay plates are shown for assays in which the indicated amino acids were added to *P. fluorescens* SBW25 culture filtrate at a final concentration of 10 mM, and aliquots of the resulting solutions were then tested for antimicrobial activity against *Dickeya dadantii*.

**Additional file 5: Specificity of the Chrome Azurol assay.** Quantitative data for the reactions of the Cu and Fe ChromeAzurol reagents with various known compounds are shown.

**Additional file 6: Additional tests of the specificity of the Chrome Azurol assay.** Quantitative data for the reactions of the Cu and Fe ChromeAzurol reagents with various additional known compounds are shown.
